

The Gap Nobody Has Bridged

THE EASY PROBLEMS

Neurons firing.
Information processed.
Behaviour controlled.
States reported.

Hard, but 'easy' in principle:
we know what an answer
would look like.

the explanatory gap

?

THE HARD PROBLEM

The redness of red.
The ache of pain.
The taste of coffee.

WHY is any of it
accompanied by
feeling at all?

We can explain what the brain DOES in ever more detail. Why any of that doing is FELT from the inside remains genuinely unsolved.
